

RFID Card MIFARE 1K 13.5MHz Clamshell >

The RFID Card MIFARE Clamshell (Fig. 1) is an essential accessory of the CIIM system. It is used for authentication in access control systems that are equipped with RFID readers, e.g.: it can be used with external RFID readers as well as with CIIM-Lock type III, IV and VI handles that operate in MIFARE standard.

The robust chassis of Clamshell cards makes them more immune to mechanical damage compared to traditional ISO cards.
