

Patch Panel 1U 24 Port, angled aperture, Keystone Jack Unloaded.

Features and Benefits

The Molex 1U 24 Port patch panel with angled, staggered Keystone Jack apertures is ideal for high density installations which utilise side of rack/cabinet cable management. The angled port design orientates the shielded or UTP Keystone jack at 15 degrees while the panel itself is a linear design, rather than a V-shape. The staggered, angled jack positions eliminate the need for an additional cable management panel, while maintaining optimised patch cord bend radius. The innovative panel design maintains an even, level aesthetic in rack/cabinet layouts where a mix of active equipment and patch panels are included.

The panel is finished in black with white port numbering for easy site administration, and is supplied with a robust rear cable management tray, designed to support 24 UTP or shielded cables. An earth cable is provided for shielded installations. The product is compatible with Molex Keystone Jacks (supplied separately) and is shipped with the necessary fixing kit.

- Eliminates the need for an additional horizontal cable management panel
- Angled, staggered ports orient the jack at 15 degrees
- Compatible with Molex Keystone Jacks (supplied separately, part numbers shown below)
- Supplied unloaded for maximum installation flexibility
- Maintains the even aesthetics of active equipment and panels within a cabinet or rack
- Comes complete with rear cable management, port identification and earth cable

Technical Information

Material: CRS (cold rolled steel)
 Thickness: 1.5mm
 Coating: Power Coat Black
 Dimensions: 49.5cm (L) x 11cm (W) x 5.5cm (H)
 Weight: 560g
